Mark scheme

January 2024

Version: 1.0 Final

2 4 1 X F M 0 3 / M S

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from oxfordaqa.com

Key to mark scheme abbreviations

M	Mark is for method
m	Mark is dependent on one or more M marks and is for method
A	Mark is dependent on M or m marks and is for accuracy
B	Mark is independent of M or m marks and is for method and accuracy
E	Mark is for explanation
√ **or ft**	Follow through from previous incorrect result
CAO	Correct answer only
CSO	Correct solution only
AWFW	Anything which falls within
AWRT	Anything which rounds to
ACF	Any correct form
AG	Answer given
SC	Special case
oe	Or equivalent
A2, 1	2 or 1 (or 0) accuracy marks
–*x* EE	Deduct *x* marks for each error
NMS	No method shown
PI	Possibly implied
SCA	Substantially correct approach
sf	Significant figure(s)
dp	Decimal place(s)
ISW	Ignore subsequent working

Q	Answer	Marks	Comments
1	$(2t+1,\ 5t+4,\ 2t+1.5)$	B1	Correct general point on L seen or used **PI** by a correct linear equation in a single variable
	$2t+1+2(5t+4)+3(2t+1.5)=18$ $18t=4.5 \qquad t=0.25$	M1	Substituting their general point into the equation for Π to obtain an equation in a single variable and obtaining a value for the variable

Q	Answer	Marks	Comments
12(c)	[Since $\cos(2\pi - \alpha) = \cos\alpha$] $\cos\frac{4\pi}{5} = \cos\frac{6\pi}{5}$; $\cos\frac{8\pi}{5} = \cos\frac{2\pi}{5}$	M1	Both results seen or used
	For the quartic equation in **part (b)** Sum of root $= 2\cos\frac{2\pi}{5} + 2\cos\frac{6\pi}{5} = -\frac{16}{16} = -1$ Product of roots $= \cos^2\frac{2\pi}{5}\ \cos^2\frac{6\pi}{5} = \frac{1}{16}$	m1	Uses sum of roots $= 2\cos\frac{2\pi}{5} + 2\cos\frac{6\pi}{5} = -\frac{16}{16}$ and Product of roots $= \cos^2\frac{2\pi}{5}\ \cos^2\frac{6\pi}{5} = \frac{1}{16}$
	Since $\cos\frac{2\pi}{5} > 0$ and $\cos\frac{6\pi}{5} < 0$, $\cos\frac{2\pi}{5}\ \cos\frac{6\pi}{5} = -\frac{1}{4}$	E1	
	$x^2 - \left(-\frac{1}{2}\right)x + \left(-\frac{1}{4}\right) = 0$ The quadratic equation with integer coefficients whose roots are $\cos\frac{2\pi}{5}$ and $\cos\frac{6\pi}{5}$ is $4x^2 + 2x - 1 = 0$	A1
